

LEAN ENTERPRISE

AN INNOVATION-LED ALTERNATE TO SAFe

Keith Dodds + Ian Kelsall

DIGITAL HURDLES

Lack of experimentation mind-set

Difficulty finding talent

Inappropriate Organisational Structure

Lack of quality data

Inflexible business processes

SCALING AGILE < > SAFe

SAFe is good. It's just not good enough.

It provides some benefit, but endangers an organization's progress toward really high functioning.

As someone who has been in the Agile movement since before it started, I do not like it. It's fast food. You can do better.
